**APPROVAL**

This report has not been submitted to the department of Agriculture and extension with the approval of the following personnel.

- 1) Field supervisor.

Dr. OKELLO DAVID NELSON

(VETERINARY OFFICER OTUBOF)

BVM, MUK

Sign: *[Signature]*..... Date: 30/7/2018.....

- 2) Academic supervisor.

Ms: ATABO HELLEN

Sign: ..... Date: .....

**DEDICATION:**

I dedicate all this report to my entire family members who have been so supportive to make me pass through my education level, my relatives, especially Mr. Ayuku Micah and Alodo Loyce who technically advised me to take up the course I am perusing now.

May God reign in you!

**ACKNOWLEDGEMENT:**

Great thanks to production office of Kaberamaido district who permitted me to carry out my industrial training in Otuboi sub county, Kaberamaido district.

I thank all the technical staff of Otuboi Sub County mostly Dr. Okello Nelson David, Dr. Wange Ronald and others for the guidance rendered during the training.

Great thanks to meat inspectors, Dr. Abeku Tom, Mr. Namrac and all the animal slaughters for the lessons carried out with me during the internship

## **CHAPTER ONE: INTRODUCTION**

### **1.0 Historical Background:**

Otuboi sub county is found in Kaberamaido District located in Eastern Uganda to the west of Soroti District and lying approximately between latitudes 1 33"N- 2 23'N and longitudes 30 01'E -34 18' E. Otuboi sub county is found in Kalaki County. It's located in the North –Eastern part of Kaberamaido district, about 53 Km on Soroti-Lira highway. It is bordered by Alwa Sub County to the West, Apapai Sub County to the South East, Kalaki Sub County to the south and Anyara Sub County to the North. Otuboi Sub County is comprised of 5 parishes and 60 villages. The parishes include: Amoru, Kadie, Opilitok, Kaberkole and Lwala.

Otuboi Sub County is made of various ethnic groups including the Acholi, Lango, Kumam and Iteso. The dominantly spoken languages are Ateso with a mixture of Lango and Kumam. This is because of intermarriages with the mentioned tribes.

### **1.1 Climate of the area:**

Like most part of Teso, Otuboi has two rainy season March to May and August to October. The dry spell comes in June to July and November to January, seasonal variations are however sometimes realized but the general trends depict a normal rainy and dry season.

### **1.2 Soil and topography:**

Otuboi Sub-county has in most areas deep loam with fine texture with well drained soils. In most parts, the soil in the Sub-county is mainly loam, sandy, and clay ranging from medium to high fertility.

This soil has prompted about 80% of the population to depend on agriculture. They cultivate crops such as millet, sorghum, simsim, maize, cassava, potatoes, and beans mainly for home consumption. The rest are engaged in petty businesses with a few rearing cattle, goats, poultry and sheep.

The Sub-county has swamps within and at the boundary of the Sub-county. There are still few trees in the Sub-county. The area is populated and the soils are suitable for agriculture.
