ABSTRACT:

Industrial training took a period of five weeks and two days that was carried in Soroti district veterinary office under district veterinary officer Dr Eyudu Patrick to equip me with the knowledge of the field and guide me on how to handle challenges in the field as an extension worker as well as the farmer. During the training, we carried out vaccination programs against foot and mouth disease and Rabies in pets animal.

We also carried out meat inspection from Soroti municipal abattoir, in this abattoir on average 14 heads of cattle are slaughtered on daily basis and about 50-60 heads of shoats. ~~The most common~~ diseases found in animal slaughtered were fascioliasis, CBPP, CCPP, Echinococcus worms, Anaplasmosis among others. We also participated in deworming of pigs, spraying and treating of ECF, Anaplasmosis and also office activities which also included cleaning of the office and organizing the office, reception of visitors who come to the office for consultations, vaccinations of pets and to buy vaccines. We participated also in feed formulation and mixing for pigs, injection of asteroid hormone to a female dog. We also found out that some farmers are reluctant to government programs of vaccination where few can participate in the programme.

Some of the common diseases were tick borne diseases like ECF, Anaplasmosis, among others.

(E)

CHAPTER ONE:

1.0.INTRODUCTION:

I carried out my internship from the veterinary office from 10th/July/2017 to 15th/Aug/2017 which covered five full weeks and two days of the training. The district veterinary office is under the local government and deals with all aspects of livestock issues. Work was done according to the work plan we designed on the first day of reporting .the work was divided into three sections, office, field and the abattoir and each student had to participate in each of these sections at the end of the week.

1.1.Location

Soroti district veterinary office is located in Soroti district, Soroti municipality eastern Uganda opposite Soroti sports ground.

1.2.Historical background.

The growth of Soroti dates as far back as 1904 when the district commissioner of Mable sent kakungulu to open up some administration posts in serere, Gweri and soroti areas. Part of the kakungulus team camped near the rock at Soroti and settled there. The choice of this site as a camping site was probably influenced by the availability of good drinking water from the nearby streams and these facts that the rock had some advantages on the matters of dams for settlers from the local inhabitants around under the organized and rule of kakugulu men.

Local inhabitants were forced to clear the forests and within a few years a large area had been cleared and considerable amount of settlement had taken place and the dispensaries in temporary materials stood at the site of the present Soroti hospital.

Later with the coming of Asian traders for small shops in the semi-permanent materials were put up in Soroti .the traders brought in clothes, salt, beads, shoes were traded with exchange for skins, beans, chicken and groundnuts [batter trade].

In 1912, Soroti attained the status of permanent headquarters of Teso region as a result of recommendation by SirFredric Jackson after the appointment as the new governor of Uganda.
