

UPTAKE OF HIV SELF TESTING AMONG MOST AT RISK POPULATIONS
TAKING HIV PRE-EXPOSURE PROPHYLAXIS IN CENTRAL UGANDA:
A CROSS-SECTIONAL STUDY

MATOVU JOHN BOSCO JUNIOR

BU/GS16/MPH/10

SUPERVISORS

ASSOCIATE PROF. JAYNE BYAKIKA-TUSIIME, PhD

DR ROY WILLIAM MAYEGA, PhD

A DISSERTATION SUBMITTED TO BUSITEMA UNIVERSITY
DEPARTMENT OF PUBLIC HEALTH IN PARTIAL FULFILLMENT OF THE
REQUIREMENTS FOR THE AWARD OF A MASTER OF PUBLIC HEALTH
DEGREE OF BUSITEMA UNIVERSITY

AUGUST 2018

TABLE OF CONTENTS

List of Tables	iv
List of Figures	iv

Dissertation Approval	vi
Acronyms and Abbreviations.....	vii
Operational Definitions.....	ix
Abstract.....	x
Acknowledgements.....	xi
Dedication	xii
CHAPTER 1: INTRODUCTION AND BACKGROUND	1
1.1 Background.....	1
1.2 Statement of the Problem.....	5
1.3 Justification of the Study.....	6
1.4 General objective	6
1.5 Specific objectives	7
1.6 Study questions.....	7
1.7 Study organisation	7
CHAPTER 2: LITERATURE REVIEW	9
2.1 Introduction	9
2.2 HIV Testing	9
2.2.1 Barriers to HIV Testing	10
2.3 Overview of HIV Self-Testing (HIVST).....	11
2.4 Acceptability of HIVST	13
2.5 HIVST among clients taking PrEP.....	15
2.6 Factors associated with HIVST uptake	17
2.7 HIVST KITS distribution approaches/ models.....	19
2.7 Conceptual Framework	21
CHAPTER 3: MATERIALS AND METHODS	24
3.1 Study area	24
3.1.1 MARPI Clinic.....	24
3.1.2 Kasensero HC II	24

3.2 Study design	25
3.3 Study Population	25
3.4 Sample size calculation	26
3.5 Sampling Strategy.....	28
3.6 Study variables	28
3.6.1 Dependent variables	28
3.6.2 Independent variables	29
3.6.3 Qualitative interviews	29
3.7 Data collection procedures	30
3.8 Data management.....	32
3.9 Data analysis.....	33
3.10 Ethical considerations	35
CHAPTER 4: RESULTS.....	37
4.1 Quantitative results.....	38
4.1.1 Socio demographic and economic characteristics of participants	38
4.1.2 Acceptability of HIV self-testing.....	40
4.1.3 Factors associated with propensity of HIVST uptake.....	40
4.1.4 HIV self-testing kit distribution model preference	47
Kit distribution model preferences	48
4.2 Qualitative results	49
4.2.1 Sociodemographic characteristics of the participants.....	49
4.2.2 Main findings from the qualitative study.....	49
4.2.3 Acceptability of HIVST	49
4.2.4 Choice of an HIV Testing Kit during routine follow 3 monthly up HIV testing for clients taking PrEP.....	55
4.2.5 Willingness to pay for the test	59
4.2.6 Preferred kit distribution models.....	60
CHAPTER 5: DISCUSSION.....	62
5.1 Proportion of MARPS taking PrEP in central Uganda who accept HIVST.....	62
5.2 Factors associated with uptake (use) of HIV testing among MARPS taking PrEP in central Uganda	63
5.3 Preferred HIVST kits distribution approaches/models among MARPS taking PrEP in central Uganda.....	67

5.4 Study Limitations	67
CHAPTER 6: CONCLUSIONS, RECOMMENDATIONS AND FUTURE RESEARCH	68
6.1 Conclusions	68
6.2 Recommendations	69
6.3 Future Research	70
REFERENCES	70

Declaration

I, Matovu John Bosco Junior, BU/GS16/MPH/10, declare that this dissertation is my original work (except where due acknowledgement has been made) and is being submitted in partial fulfillment for the award of the Master's degree in Public Health of Busitema University, 2018. I also declare that this research has not been previously presented or submitted to this university as a research project or any other institution for partial fulfillment of any qualification

UPHIA	Uganda Population-Based HIV Impact Assessment
VCT	Voluntary Counselling and Testing
WHO	World Health Organisation

Operational Definitions

Most at Risk Persons	Individuals or groups of people at a particularly higher risk of HIV acquisition compared to the general population. These groups of people have higher than average HIV prevalence when compared to the general population. In this report, the terms Most at risk population and Key Population (KP) are used interchangeably.
Vulnerable populations	Groups of people who are particularly vulnerable to HIV infection in certain situations or contexts, such as adolescents (particularly adolescent girls), orphans, street children, people in closed settings (such as prisons or detention centres), people with disabilities and migrant and mobile workers.
Key populations	Refers to both vulnerable and most-at-risk populations. They are important to the dynamics of HIV transmission in a given setting and are essential partners in an effective response to the epidemic
HIV Self-Testing	Any form of HIV testing in which an individual collects his/her own sample, performs a simple, rapid laboratory test, and is therefore the first to know the results.
Oraquick	An HIV self-testing kit which uses oral fluid to detect HIV antibodies A self -test is performed by taking an oral swab of the inside of the human mouth and are read within the first 20 minutes.
Feasibility of HIVST	This is the degree to which the results from an HIVST can be trusted to detect the HIV virus.
Acceptability of HIVST	The number of people who undertake an HIVST after being offered the test kit.
Uptake of HIV selftesting	The action of taking up or making use of HIV self-testing services that are available. In this study, we used acceptability, testing kit preference, willingness to pay for the kits, amount to pay for the kit as factors that can affect access and use (uptake) of the HIV self-testing in clients taking PreP.

Index Client	An existing HIV positive client through whom healthcare workers go to reach other family members for HIV counselling and testing.
Differentiated Service Delivery Approach	A patient centred approach to HIV prevention, care, and treatment that targets to meet individual needs of the patients.
Boda-boda taxi men	These are men who ride motorcycles (referred to as boda-boda in the Uganda transport sector) for commercial purposes.
Adolescent girls and young women (AGYW)	Refers to a population category of females aged 15-24 years old. In this study, AGYW refers to those females in the age group 15-24 who were taking Prep.

Abstract

Background: In Uganda, about 78% of the people living with HIV know their status compared to the global target of 90% by 2020. HIV self-testing (HIVST) could be a suitable strategy in identifying people living with HIV who do not regularly seek for HIV testing services. This study assessed the uptake of HIV self-testing among Most at Risk Populations (MARPS) currently enrolled on HIV Pre-Exposure Prophylaxis in Uganda.

Methods: This was a mixed methods cross-sectional study involving 366 MARPs attending Pre-Exposure clinics at MARPI clinic Mulago Kampala and Kasensero HC II Kyotera clinic. Data collection tools were an interviewer administered structured questionnaire and an in depth interviews guide. A chi square test was performed to determine association between socio demographic, economic factors and propensity to uptake HIVST while logistic regression was used to determine the predictors of uptake

of HIVST. Deductive thematic content analysis was performed to explore factors that promote and inhibit HIVST uptake. Results: There was 100% (365/365) acceptability for HIV self-testing and 66% (n=243) of respondents had high propensity to uptake HIVST. Predictors of uptake were location of clinic (rural vs urban) (aOR = 17.63 95% CI 8.44 – 36.81, p<0.001); key population category (female sex worker's vs others) aOR= 4.36 (95% CI: 1.63 – 11.66, p=0.003) and education level (\leq primary vs post primary) aOR=0.38 (95% CI: 0.20 – 0.73). Conclusions: HIV self-testing is highly acceptable among clients taking PreP in central Uganda. Uptake of HIVST is significantly associated with the location of the PreP clinic, the MARP category and one's level of education. HIVST kit distribution can employ a multi model approach. Recommendation: HIVST should be adopted as an HIV testing approach in clients taking PreP.

Acknowledgements

I wish to acknowledge the support given to me by all the lecturers of the Faculty of Health Sciences, Busitema University throughout the two academic years. You have been friendly and exemplary.

To my supervisors; Professor Jayne Byakika-Tusiime and Dr Roy William Mayega for the timely responses to my research needs and for the guidance and corrections without which I would not be able to produce a meaningful document.

All classmates who have provided me with positive criticisms and constructive advice from which I gained more knowledge and skills.

The leadership and management of MARPI Mulago and Rakai Health Sciences program for giving me an opportunity to collect data from health facilities they support.

To research assistants MARPI Mulago and Kasensero HC II who endured all kinds of pressure while collecting data.

Finally, to the Program Manager, Ministry of Health, AIDS control program and all staff of the HTS unit for encouragement, administrative and material support without which this study would not be tenable.

May God bless you all!

Dedication

This dissertation is dedicated to all clients for whom we are called to serve and to all health workers who tirelessly dedicate their efforts day and night to ensure that client needs are met.
