A final year project proposal submitted to the Department of Water Resources Engineering as a partial fulfilment for the award of Bachelor of Science in Water Resources Engineering.

ABSTRACT

The water fountain at Busitema university is a Solar powered Aquaponic water fountains. This fountain consists of filtration systems, drainage and overflow systems, fish and plants (aquaponics), solar power system and Automation system.

Samples of the fishpond effluent were collected for its quality characterization. The parameters tested included Total ammonia, Dissolved oxygen, pH, temperature. The results showed that ammonia levels were high above the acceptable range. The DO level in the effluent was below the minimum acceptable of 5mg/L. However, when the fishpond effluent was passed through a vegetable-based bio-filter, the concentration of ammonia in the fishpond effluent was reduced to the acceptable range (below 1mg/L), safe for reuse in the fishpond. The water was pumped back to the fish tank through the fountain sprinkler and nozzles. This system recirculates used water hence reduce water wastage and consumption compared to traditional farming. The only losses in the system are due to evaporation and transpiration.

The system is controlled using a mobile App. Arduino Uno is programmed using Arduino software to control the electronic components like pumps including pH sensor, temperature sensor, and water level sensor. The sensors were used to measure the water quality parameters; that is, pH, temperature and water level in the tank respectively. The micro controller reads data from the sensors, and sends and commands to actuators to execute an operation. All information is visualized from the app which also enables the user to turn off the main pump, and sturdy variations of temperature and pH in a day.

DECLARATION

We, hereby declare to the best of our knowledge, that this project report is an outcome of our original work and that it has not been presented to any institution of learning for an academic award.

APPROVAL

This final research report has been submitted to the Faculty of Engineering for examination with approval of our supervisor.

MAIN SUPERVISOR: MR. MASERUKA S BENDICTO

ACKNOWLEDGEMENT

First, we would like to thank the almighty God for his unspeakable grace, guidance and protection during the compilation of this research proposal report.

We would like to express our genuine gratitude and appreciation to our academic supervisor

Mr. Maseruka.S. Bendicto, The Co- Supervisors Mr. Obeti Lawrence, Mr. Lwanyaga Joseph Ddumba, Mr. Wanji Mario, and the entire department of mining and water resources engineering, for their encouragement, guidance and support from the initial to the final level of this writing and for accepting us to work as a team. They enabled us to develop and understand the subject matter as well as the appropriate form of delivery of this research and above all realize that two heads are better than one. Without their assistance, brotherly approach and free discussion, this report would not have been completed.

Lastly, we are grateful to Faculty for enabling us access the water pool (facility) source with a lot of ease, to the quality control officers of Busitema University and the entire staff for the permission granted to carry on the research work, to our fellow students and friends in and out of the university for their unseasonal support and to our parents and guardians. May God bless all your endeavors.

ACRONYMS

FAO—Food and Agriculture organization

NUE—Nutrient use efficiency

RAS—Recirculating aquaculture system

N--Nitrogen

P--Phosphorus

K--Potassium

Mg-- Magnesium

Fe--Iron

NH₃-- Ammonia

NH₄⁺--Ammonium

NO₂⁻ --Nitrite

NO₃⁻ --Nitrate

TAN—Total ammonia nitrogen

HRT—Hydraulic Residence time

HLR—Hydraulic loading rate

Q—flow rate

t—time

T--Temperature

pH—potential of hydrogen

DO—Dissolved oxygen

CHAPTER THREE	54
3	METHODOLOGY	54
3.1	SPECIFIC OBJECTIVE ONE:.....	54
	TO DETERMINE THE SYMBIOTIC RELATIONSHIP BETWEEN FISH AND PLANTS.....	54
3.1.1	Methods of data collection.....	54
3.1.2	Materials and equipment.....	54
3.1.3	Characterize the fishpond parameters and quantify ammonia in fishpond.	54
3.1.4	Sampling	55
3.1.5	Tests procedures for the different parameters.	56
3.1.6	Selection of suitable fish species to be raised in aquaculture.	59
3.1.7	Stocking Density	59
3.1.8	Feeding of the selected species (Tilapia)	60
3.1.9	Growth performance analysis (monitoring):.....	61
3.1.10	Quantification of Ammonia level in the pond.....	61
3.2	SPECIFIC OBJECTIVE TWO: DESIGN THE COMPONENTS OF THE SYSTEM.....	63

3.2.1	Design of the pond	63
3.2.2	Design of the bio-filtration system components	64
3.2.3	The design and construction of the bio-filtration system components.....	66
3.2.4	Selection of the fountain nozzle and determine the amount of water discharged.	68
3.2.5	Analysis and sizing of pipes.....	68
3.2.6	Relative capacities.....	68
3.2.7	Pipe flow frictional formula.....	69
3.2.8	Pump head will be calculated as,	69
3.2.9	Pressure drops	69
3.2.10	Power	69
3.2.11	Pump Selection.	70
3.2.12	Sizing solar system.....	70
3.2.13	Overflow	72
3.2.14	Sand Filters	73
3.2.15	Drain System.....	73
3.2.16	Equalizer pipes.....	73
3.2.17	Modelling using AutoCAD and ANSYS Fluent software's	74
3.2.18	Monitoring and control of the system	75
3.3	SPECIFIC OBJECTIVE THREE:	81
	TO CONSTRUCT AND TEST THE SYSTEM PERFORMANCE	81
3.3.1	Construction of the System	81
3.3.2	Material selection for all components.....	81
3.3.3	Testing the system performance	81
3.4	SPECIFIC OBJECTIVE FOUR: TO CARRY OUT AN ECONOMIC ANALYSIS OF THE SYSTEM.....	82
3.4.1	Payback period.....	82
4	CHAPTER FOUR: RESULTS AND DISCUSSIONS	85
4.1	Characteristics of the fishpond effluent	85
4.1.1	How the results are analysed.....	85
4.1.2	First sampling.....	85
4.1.3	Second sampling.	85
4.1.4	Third sampling.	85
4.1.5	Fourth sampling.	86
4.1.6	Fifth sampling.	86

4.1.7	The Control Experiment.....	87
4.2	Design the components of the system.....	89
4.2.1	Power and pipe work calculations.....	89
4.2.2	Results for the charging rate of the battery	90
4.2.3	Discharging rates of Battery	91
4.2.4	Design of Overflows	93
4.2.5	Design of filters.....	93
4.2.6	Design of Drain lines	94
4.2.7	Selection of equalizer pipe.....	94
4.2.8	Simulation using ANSYS Fluent and AutoCAD	95
4.3	Automation of the system	101
4.3.1	Prototyping.....	101
4.3.2	Final Design of the system.....	101
4.3.3	Main Circuit Diagram	102
4.3.4	Software Development.....	103
4.3.5	Performance of the system.....	104
