SURPERVISOR: Mr. ALUNYU ANDREW

DECLARATION

We hereby declare that this project is based on our original research work except for work where citations and quotations have been duly acknowledged. It has not been presented with any of its contents at any institute of higher learning for an academic reward.

APPROVAL

This is to approve that this proposal has been fully and consistently worked on and submitted to the department of computer engineering under the supervision of the undersigned supervisor;

.....

Mr. Alunyu Andrew

Date:

DEDICATION

We dedicate this report to our parents and to all our friends for always being there for us especially in this journey of academics.

ACKNOWLEDGEMENT

First and foremost, we extend our sincere and inexplicable gratitude to the Almighty God who enabled us to strive through all the challenges up to this time.

We would also like to acknowledge and appreciate all the lecturers we approached for any kind of assistance in the development of this project and writing of this proposal report but most outstanding Mr. Alunyu Andrew our supervisor and Mr. Lusiba Badhiru. We thank you all for the guidance and time rendered to us.

Finally, to our classmates who sacrificed their time and knowledge and engaged in discussions as regards the successful development of this project, thank you for the team work and may God bless you.

ABSTRACT

The coronavirus COVID-19 pandemic is continuously spreading until now everywhere on the earth, and causing a severe health crisis. So the helpful and safe-keeping method is wearing a face mask in all areas where people are gathered, according to the World Health Organization (WHO). Along with the face mask, body temperature and sanitization also plays a vital role in being safer. Thus, monitoring the individuals that are wearing the mask or not is more significant. In this case, we suggested a system that uses color sensor to identify specified color of a mask an individual is wearing. Then the automatic temperature checking is done. Finally, the system gives an arlarm in case of the absence of the required mask or abnormal temperature. Our approach would be beneficial in reducing time wasted on manual labour, the spread of this infectious disease and will encourage people to use face masks and monitoring the temperature can keep the workplace safe.

LIST OF ACRONYMS

ID	Identification
IT	Information and Technology
LAN PCB	Local Area Network Printed Circuit Board
Wi-Fi IC	Wireless Fidelity Integrated Circuit
