**FACULTY OF ENGINEERING**  
**DEPARTMENT OF COMPUTER ENGINEERING**  
**AN RF BASED TRAFFIC POLICE ALERT SYSTEM FOR PASSENGER OVERLOAD**  
**IN TAXIS**

**BY**

**KYUKULE KENNETH**

**BU/UP/2013/194**

**E-MAIL:** kyukule22@gmail.com

**Supervisor:**

**Mr. ARINEITWE JOSHUA**

A PROJECT REPORT SUBMITTED IN THE PARTIAL FULFILLMENT OF THE  
REQUIREMENTS FOR THE AWARD OF THE DEGREE OF BACHELOR OF  
COMPUTER ENGINEERING OF BUSITEMA UNIVERSITY

**DECLARATION**

I, KYUKULE KENNETH do hereby declare that this Project Report is original and has not been submitted for any other degree award to any other University before.

Signature..... Date.....

Kyukule Kenneth

Bachelor of Science in, (BU)

Department of Computer Engineering

Busitema University.

**APPROVAL**

This project proposal titled “RF based traffic police alert system for overloaded taxi” has been submitted for examination with the approval of the supervisor:

Signed: .....

Date: .....

Mr.Arineitwe Joshua

Department of Computer Engineering,

Busitema University.

## **LIST OF ACRONYMS**

**ASK:** Amplitude Shift Keying

**OOK:** On Off Keying

**CPCA:** Carrier Present, Carrier Absent

**RF:** Radio Frequency

**LNA:** Low Noise Amplifier

**FCC:** Federal Communications Commission

**CPU:** Central Processing Unit

**ROM:** Read Only Memory

**EEPROM:** Electrically-erasable programmable Read Only Memory

**RAM:** Random Access Memory

**PCB:** Printed Circuit Board

**GPS:** Global Positioning System

**BER:** Bit Error Rate

## **ABSTRACT**

People's Highway Law" clearly provides that vehicle overloading is illegal. Our country have also enacted a series of laws and regulations, local governments have also introduced a large number of files to control overloading of passenger vehicles, but the effect of any contingent is not obvious. Practice has fully proved that the efforts that came only from policy to control overloading of passenger vehicles is not enough, which made the work of relevant departments seem rather passive. In recent years, automotive electronic control technology has been rapidly developed, and especially the control accuracy, control range, intelligence and networking, etc. have been greatly exceeded.

Currently different systems have been design to combat the problem of overloading in public services vehicles for example the Automatic Passengers Overload Control System in Public Buses. These systems have a number of limitations. In this proposed system, based on the platform of Microcontroller 89C51 the RF based Traffic Police Alert System for overloading public Vehicles will be designed. Compared with the traditional control overloading methods, it can response fast, saved a lot of manpower, material and financial resources, and can be monitored in real time in the number of passenger, which can control better of overloading of passenger vehicles.

## CHAPTER ONE: INTRODUCTION

### 1.1 BACKGROUND

In today's society overloading has been recognized to be both a safety concern as well as a cost concern. Overloaded vehicles threaten road safety and are contributing too many of the fatal accidents on our roads. The overloaded vehicle will not only put the driver at risk but also passengers and other road users. The vehicle will be less stable, difficult to steer and take longer to stop.

Over loaded vehicle can cause tyres to overheat and wear rapidly which increases the chance of premature, dangerous and expensive failure or blow outs. In Uganda however, one of the solutions for overloading is to randomly stop the vehicles and check if the passenger capacity is exceeded.

"People's Highway Law" clearly provides that vehicle overloading is illegal. Our country have also enacted a series of laws and regulations, local governments have also introduced a large number of files to control overloading of passenger vehicles, but the effect of any contingent is not obvious [1]. Practice has fully proved that the efforts that came only from policy to control overloading of passenger vehicles is not enough, which made the work of relevant departments seem rather passive. In recent years, automotive electronic control technology has been rapidly developed, and especially the control accuracy, control range, intelligence and networking, etc. have been greatly exceeded [2].

Currently different systems have been design to combat the problem of overloading in public services vehicles for example the Automatic Passengers Overload Control System in Public Buses. These systems have a number of limitations. In this proposed system, based on the platform of Microcontroller 89C51 the RF based Traffic Police Alert System for overloading public Vehicles will be designed. Compared with the traditional control overloading methods, it can response fast, saved a lot of manpower, material and financial resources, and can be monitored in real time in the number of passenger, which can control better of overloading of passenger vehicles.
